Challenge: Student Report System

Write a Python program using **user-defined functions** to manage student marks.

- **Requirements:**

1. Create a function get_marks()
    - Takes input for marks of 3 subjects
    - Returns them as a list
2. Create a function calculate_total(marks)
    - Takes the list of marks
    - Returns the total
3. Create a function calculate_average(total)
    - Returns the average marks
4. Create a function get_grade(avg)
    - Returns grade based on:
        - A → avg ≥ 90
        - B → avg ≥ 75
        - C → avg ≥ 50
        - D → avg < 50
5. Main program should:
    - Call all functions
    - Display total, average, and grade
